- Note:
- All parameters measured at nominal input, rated load and 25°C of ambient temperature unless otherwise specified.
  - Ripple & noise are measured at 20MHz of bandwidth by using a 12" twisted pair-wire terminated with a 0.1uf & 100uf parallel capacitor.
  - The power supply is intended to be install as a component inside the enclosure of final equipment. The final equipment must be re-confirmed that it still meets the EMC directives.
  - These units are designed for mounting on horizontal DIN rail. Ensure clearance of minimum 35mm from adjacent components for proper ventilation.
